IKPM CRM PORTAL

Master Operating Procedures, Client Lifecycles & Document Filing Architecture

SYSTEM PURPOSE & COMPLIANCE STANDARD: This document provides the definitive end-to-end operational manual for the Imran Khan Pest Management (Pvt) Ltd (IKPM) Enterprise Portal. It covers role boundaries, B2B corporate and B2C residential client lifecycles, contract termination protocols, statutory FBR tax compliance, exact document storage hierarchies, and the HR 30-day payroll & compensation engine.

1. Role Taxonomy & Operational Responsibilities

To eliminate workflow bottlenecks and enforce internal controls, the IKPM portal establishes distinct operational roles. Specific role names have been formalized to match corporate governance standards:

Role Title	Key Responsibilities in CRM Portal	Data Access & Permissions Scope
Super Admin (CEO / Director)	Full operational and financial control. Sets roles, manages system settings, approves contract cancellations, grants final payroll approval, and executes CEO approval gates for invoice discounts > 15%.	Company-wide national access; edits all modules; configures tax jurisdictions and system audit logs.
Operations Manager (formerly Operations)	Reviews incoming CRO inspection reports and accepted proposals. Creates client service contracts, generates 12-month dispatch calendars, assigns coordinators, and monitors national SLA completion.	Company-wide operational scope. Full edit permissions on Jobs, Contracts, Calendar, Complaints, Challans, and Attendance.
Operations Coordinator (formerly Team Leader)	Field team lead and Quality Control (QC) supervisor. Conducts on-site inspections, leads PCO technicians, inspects completed treatments, collects signed physical Delivery Challans, and verifies job reports.	Branch / assigned team scope. Full edit on Inspections, Jobs, Challans, and Daily Attendance. Strict submitter-cannot-verify guard.
Technician (PCO) (Field Pest Control Operator)	Executes scheduled treatments at client premises. Logs chemical consumption, records target pest counts, captures mandatory before/after photo evidence, and submits digital service reports.	Own-job scope only. Can view assigned jobs, mark arrival/departure, and submit treatment reports.
CRO (Sales) (Customer Relations Officer)	Leads intake, customer meetings, commercial proposal drafting, rate calculations, and contract initiation. Hands off the client once the proposal is signed and accepted.	Full access to Leads Pipeline, Customers, Proposals, and Contracts initiation.
Accounts / Finance	Generates statutory FBR/SRB/PRA tax invoices, verifies Delivery Challan numbers, posts payments, logs WHT Advance Tax certificates, and reviews 30-day payroll cycles.	Company-wide financial scope. Full edit on Invoices, Tax, Payroll verification, and payment disbursements.
Human Resources (HR)	Enrolls employees, sets monthly salary structures (Basic + Allowances), monitors probation end dates, logs employee private data (CNIC/bank), and initiates draft monthly salary cycles.	Full edit on Employee profiles, HR records, and draft payroll preparation.

2. Scenario 1: B2B Corporate Client End-to-End Workflow

The B2B lifecycle represents enterprise accounts (factories, warehouses, corporate offices, hotels, restaurants, and hospitals) requiring multi-site treatment, stringent audit documentation, and statutory FBR compliance.

Stage 1: Lead Inquiry & Company Intake (/crm/leads)

The CRO logs the inquiry, entering company legal name, industry type, NTN/STRN, contact persons, and target facility locations. The system automatically assigns an inquiry ID (e.g., LEAD-2026-0045) and creates a dedicated client workspace.

Stage 2: Operations Assignment & Site Inspection (/operations/inspections)

Operations Manager assigns an Operations Coordinator to conduct an exhaustive physical survey. The Coordinator assesses total square footage, structural vulnerability, rodent runways, cockroach harborage zones, and chemical sensitivity. An Inspection Report with risk scoring (Low/Medium/High) is finalized and filed into the client folder.

Stage 3: Commercial Proposal & Service Matrix (/crm/proposals)

CRO generates a formal proposal with customized treatment frequency (e.g., 24 visits/year), bait station quantities, insect light traps (ILTs), and statutory tax options (SRB 16%, PRA 13%, or Islamabad 15%). The proposal automatically computes subtotal, tax breakdown, and total contract value before generating an official PDF.

Stage 4: Contract Execution & Automated Dispatch Generation (/crm/contracts)

Upon digital or physical signing, the proposal converts to an active Contract (e.g., CNT-2026-0012). Operations Manager inputs the service cycle dates. The automated dispatch generator instantaneously populates the 12-month calendar (/operations/calendar), allocating individual job tickets with pre-assigned PCO teams and visit sequence numbers.

Stage 5: Field Execution & Service Report Submission (/operations/jobs)

The assigned PCO technician arrives on site, executes the treatment per standard operating procedures (SOPs), records chemical batch numbers and grams consumed, logs target pest counts, captures mandatory before/after photos, and submits the job report.

Stage 6: QC Verification & Physical Challan Protocol (/operations/jobs)

Dual-Control Guard: The submitter cannot verify their own report. The Operations Coordinator inspects the site, checks chemical safety adherence, enters the physical signed Delivery Challan Number (e.g., CHL-2026-0089), uploads the signed challan scan, and marks the job "Verified & QC Passed". The system automatically files the report, photos, and challan into the client drive.

Stage 7: Statutory FBR Invoicing & Accounts Receivable (/accounts/invoices)

Accounts team generates a statutory Tax Invoice. The invoice links the verified job and displays the physical Challan Number. Invoices comply with Pakistan sales tax rules. Once posted, invoices are permanently immutable (amounts cannot be overwritten; credit notes are required for adjustments).

Stage 8: Payment Settlement & WHT Certificate Recording (/accounts/invoices)

When corporate clients remit payment via bank transfer, Accounts logs the transaction reference. If the client withholds income tax (e.g., 3% or 4% under Section 153), Accounts uploads the WHT CPR certificate. The system records this as an Advance Tax Asset (reducing IKPM annual income tax liability) rather than a bad-debt discount.

3. Scenario 2: Residential (B2C) & Individual Client Workflow

Residential clients (villas, apartments, residential estates) and walk-in cash clients require rapid turnaround without the bureaucratic delays of mandatory commercial inspection surveys.

Fast-Track Lead & Proposal Creation:

CRO or Front Desk creates the client profile under Customer Type = "Individual". The portal bypasses the mandatory site inspection requirement, allowing direct generation of single-visit or short-term treatment proposals (e.g., Termite Proofing, Bedbug Treatment, General Fumigation).

FBR Walk-In / Cash Tax Profile:

Invoices are generated using the statutory FBR Cash profile (with 5.5% WHT for un-registered consumers) or standard provincial sales tax. The system automatically includes the consumer CNIC or mobile number as the primary identifier.

Single-Job Dispatch & Instant Execution:

A single dispatch ticket is created on the calendar. The PCO technician completes the service, collects customer digital acknowledgment or physical signature, and captures proof-of-service photos.

On-the-Spot Invoicing & Cash Receipt:

The technician or Accounts immediately issues the invoice and generates an official Cash Payment Receipt (/accounts/invoices). The receipt PDF is automatically filed under the client folder and sent via SMS / WhatsApp notification.

4. Scenario 3: Contract Cancellation & Mid-Cycle Invoicing

When an active service contract is terminated prior to its contracted end date, specific accounting and operational protocols must be executed to ensure proper revenue recognition, asset recovery, and audit compliance.

Case 4.1: Early Mutual Termination with Completed Uninvoiced Visits (Pro-Rata Invoicing)

Operational & Financial Action:
1. **Filter Executed Jobs:** Operations Manager navigates to /operations/jobs, filtering by the contract ID. Verify that all completed visits have submitted job reports and signed delivery challans.
2. **Void Pending Scheduled Jobs:** Cancel or void all remaining scheduled visits so no further dispatch alerts occur.
3. **Issue Final Pro-Rata Invoice:** Accounts navigates to /accounts/invoices -> "New Invoice". Select the customer, link the specific completed jobs, and invoice only the completed visits at the contracted unit rate.
4. **Contract Status Update:** Change contract status to "Cancelled" in /crm/contracts, noting the mutual termination reason and attaching the settlement letter.

Case 4.2: Termination with Advance Payment Received (Credit Note & Refund Protocol)

Operational & Financial Action:
1. **Immutability Guard:** Never edit or delete the original posted invoice. Posted invoices are permanent legal records.
2. **Compute Unearned Revenue:** Calculate unconsumed service value: *Refund Amount = Advance Paid - (Completed Visits x Unit Rate)*.
3. **Issue Credit Note:** Accounts issues an official Credit Note (e.g., CN-2026-0008) in /accounts/invoices referencing the original invoice.
4. **Manager Approval Gate:** The Credit Note routes to /admin/approvals where the Super Admin (CEO) approves the debit adjustment.
5. **Disbursement:** Record bank transfer refund receipt and file the refund voucher in the client folder.

Case 4.3: Customer Default / Non-Payment Suspension

Operational & Financial Action:
1. **Service Freeze:** If payments exceed overdue SLA threshold (e.g. 45 days), Accounts marks the customer account "Suspended".
2. **Calendar Auto-Hold:** The portal automatically places upcoming service dispatches on hold, alerting Operations.
3. **Recovery Invoicing:** Issue a Formal Statement of Account (SOA) and final recovery invoice for all verified visits completed to date.

Case 4.4: Equipment & Asset Retrieval Protocol

Operational Action:
For contracts involving leased hardware (Insect Light Traps, Rodent Bait Stations, Pheromone Traps), the system automatically prompts the creation of a "Hardware De-Installation & Retrieval" job ticket. The PCO technician retrieves the devices, logs serial numbers in the Device Register (/operations/devices), and uploads the signed Equipment Return Challan.

5. Master Document Filing & Cloud Storage Directory Hierarchy

Every document, report, signed voucher, and PDF generated in the IKPM CRM is automatically named, categorized, and filed into structured directory trees. Files are dual-indexed in Cloud Firestore and secured cloud storage with SHA-256 integrity hash.

Document Category	Exact Storage Directory Path in Portal	Naming Convention & Format	Accessible By
Client Proposals	`/Clients/{ClientName}__{ClientID}/Proposals/{YYYY}/`	PROP-{YYYY}-{SEQ}_v{VER}.pdf e.g. PROP-2026-0021_v1.pdf	CRO, Ops Manager, Accounts, Admin
Service Contracts & AMCs	`/Clients/{ClientName}__{ClientID}/Contracts/{YYYY}/`	CNT-{YYYY}-{SEQ}_Signed.pdf e.g. CNT-2026-0014_Signed.pdf	Ops Manager, CRO, Accounts, Admin
Site Inspection Reports	`/Clients/{ClientName}__{ClientID}/Inspections/{YYYY}/`	INSP-{YYYY}-{SEQ}_Survey.pdf + High-res risk photos	Ops Coordinator, Ops Manager, CRO
Service Reports & Photos	`/Clients/{ClientName}__{ClientID}/Service Reports/{YYYY}/{MM}/{JobID}/`	REP-{JobID}.pdf IMG_{JobID}_Before_01.jpg IMG_{JobID}_After_01.jpg	Technician, Ops Coordinator, Ops Mgr, Client
Signed Delivery Challans	`/Clients/{ClientName}__{ClientID}/Challans/{YYYY}/`	CHL-{ChallanNumber}_Scan.pdf e.g. CHL-2026-0042_Scan.pdf	Ops Coordinator, Ops Manager, Accounts
Tax Invoices & Credit Notes	`/Clients/{ClientName}__{ClientID}/Invoices/{YYYY}/`	INV-{YYYY}-{SEQ}.pdf CN-{YYYY}-{SEQ}.pdf	Accounts, Super Admin, Client View
Payment Receipts & WHT	`/Clients/{ClientName}__{ClientID}/Payments/{YYYY}/`	REC-{YYYY}-{SEQ}.pdf WHT_CPR_{ChallanNo}.pdf	Accounts, Super Admin
Company Library (SOPs/MSDS)	`/Company Library/{Category}/`	MSDS_{ChemicalName}.pdf SOP_{PestCategory}.pdf	All Internal Staff (Restricted from clients)
Employee Salary Slips	`/Employees/{EmpName}__{EmpID}/Salary Slips/{YYYY}/`	SLIP-{YYYY}-{MM}_{EmpID}.pdf e.g. SLIP-2026-10_EMP-0004.pdf	HR, Accounts, Respective Employee

6. Employee Salary Configuration & 30-Day Payroll Engine

The IKPM portal features an integrated Human Resources and Payroll engine configured per Pakistan statutory employment standards. Below is the step-by-step procedure to set employee salaries and process monthly cycles.

Step-by-Step: Where & How to Configure Employee Salary

1. Access Employee Management:

Navigate to **HR -> Employees** (URL: /hr/employees). Only users with HR, Accounts, Admin, or Super Admin roles have access.

2. Locate Employee & Open Salary Structure:

In the employee directory table, locate the desired employee. Each row displays the employee ID, Name, Role (Operations Manager, Operations Coordinator, PCO, etc.), and a **Salary (Gross)** badge. In the *Actions* column on the right, click the **Banknote icon** (or open the employee details modal and click **"Configure Salary"**).

3. Configure Component Breakdowns in Modal:

Input the agreed compensation components into the Salary Structure modal:
- **Basic Salary (PKR):** Fixed base wage (minimum statutory standard).
- **Attendance Allowance (PKR):** Incentive for 100% punctuality (auto-forfeited if >= 2 late marks or absences in cycle).
- **Mobile Package Allowance (PKR):** Monthly communication stipend for field coordination.
- **Bike Maintenance Allowance (PKR):** Fuel and wear stipend for field technicians.
- **Other Allowances / Overtime Rate:** Specialized allowances and hourly overtime rate.
- **Bank Details:** Bank Name and Account Number / IBAN for disbursement.

4. Real-Time Gross Pay Auto-Sum & Save:

The modal automatically calculates in real time: **Total Gross = Basic + Attendance + Mobile + Bike + Other**. Click **"Save Salary Structure"**. The record is committed to Firestore and immediately updates employee cards.

30-Day Payroll Cycle Calculation & Multi-Tier Approval Chain

Payroll runs on a strict 30-day accounting cycle. The workflow is split across three distinct organizational gates:

Gate / Phase	Responsible Role	Calculation & Action	Status Badge
1. Cycle Initiation	HR Manager	Clicks "New Salary Cycle" in /hr/payroll. Selects 30-day start date. The engine aggregates daily attendance records from /operations/attendance and applies late penalty / absent day deductions.	**Draft (HR)** (Amber)
2. Finance Audit	Accounts / Finance	Audits deductions, overtime hours, job incentive bonuses, and advances. Ensures gross vs net calculations balance against the general ledger. Clicks "Verify Cycle".	**Verified (Finance)** (Blue)
3. Executive Approval	Super Admin (CEO)	Reviews aggregate payroll summary and high-variance lines. Grants formal authorization by clicking "Approve Cycle". Authorizes bank fund release.	**Approved (CEO)** (Teal)
4. Disbursement & Slips	Accounts / Finance	Inputs payment method (Bank Transfer / Cheque) and transaction reference number. Automatically generates individual PDF Salary Slips and files them into each employee's folder.	**Paid & Disbursed** (Slate)

7. System Integrity, Audit Logs & Support

Every mutation in the IKPM CRM Portal (including role assignments, status changes, proposal edits, invoice postings, salary updates, and QC verifications) is recorded in the permanent audit trail with timestamp, user ID, IP address, and change diff. This guarantees ISO 9001:2015 traceability and full compliance with Pakistan corporate tax authorities.

Document Version: 2.4.0 (Final Release)	**Effective Date:** October 2026
Approved By: Chief Executive Officer (CEO)	**System Architecture:** React + Vite + Cloud Firestore
